

An Internship Report
Of
Junior Software Developer - Agribusiness Solution

Submitted
To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 2410031752
Name of Student: LAKSHYA SHARMA
Batch: 2024-2028

Candidate's Declaration

I, LAKSHYA SHARMA, do hereby declare that the internship report titled "Junior Software Developer - Agribusiness Solution" has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering.

All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own and has not been submitted to any other institute for any degree/diploma requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:-

Student Name: LAKSHYA SHARMA

Roll No.: 2410031752

Acknowledgement

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to thank YuvaIntern for providing me the opportunity to work as a Junior Software Developer - Agribusiness Solution and for giving me exposure to software development for agribusiness requirements.

I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I express my gratitude to my parents for their blessings.

Signature:-

CERTIFICATE OF EXPERIENCE

To Whomsoever It May Concern

This is to certify that **Lakshya Sharma** successfully completed an internship with **YuvaIntern** in the role of **Junior Software Developer - Agribusiness Solution**.

Throughout the tenure of this internship, Lakshya demonstrated consistent dedication, professionalism, and a strong willingness to learn and grow. Their contributions were valued by the entire team at YuvaIntern, and they conducted themselves with integrity and commitment throughout the program.

We commend Lakshya's hard work and wish them continued success in all future endeavors.

Date of Issue: August 29, 2026

Internship Offer Letter

Dear Lakshya Sharma,

We are pleased to extend to you this formal offer for an Internship position as **Junior Software Developer - Agribusiness Solution** at **YuvaIntern**. We were impressed with your background, skills, and enthusiasm, and we believe you will be a valuable addition to our team.

Internship Details:

- **Start Date:** August 01, 2026
- **End Date:** August 29, 2026
- **Duration:** 4 weeks
- **Location:** Remote

Key Responsibilities:

As a **Junior Software Developer - Agribusiness Solution** intern, you will work on tasks and projects related to As a Junior Software Developer for Agribusiness Solution, you will be responsible for developing software solutions to optimize agricultural processes and improve yield. You will work closely with agribusiness experts to understand their needs and translate them into functional software applications..

Benefits & Learning Opportunities:

Throughout the duration of your internship, you will have the opportunity to:

- Develop practical skills in [relevant skills/tools].
- Gain hands on experience in [specific tasks/projects].

As part of joining our team, you may be required to sign a confidentiality or non-disclosure agreement. You are also expected to comply with all applicable company policies and regulations, which will be provided to you upon commencement.

A handwritten signature in black ink, appearing to read "Kounal".

4. Project Description

4.1 Introduction

This report presents a detailed account of the internship undertaken at YuvaIntern in the role of "Junior Software Developer - Agribusiness Solution". The internship was completed from 01 August 2026 to 29 August 2026 for a duration of four weeks in a remote working arrangement.

The primary focus of the internship was to understand and contribute to software solutions related to agribusiness. The role involved understanding the needs of agribusiness stakeholders and translating those requirements into functional software applications. The internship therefore provided practical exposure to applying software-development concepts to an agriculture-related domain.

The internship also helped develop professional skills such as problem solving, requirement understanding, documentation, communication, and structured software development.

4.2 Organization Profile

YuvaIntern is the organization through which the internship was completed. The supplied internship documents identify Kounal Gupta as the Founder of YuvaIntern. The offer letter states the organization address as B12, Sector 6, Noida, 201301 and specifies a remote internship arrangement.

The Certificate of Experience issued by YuvaIntern confirms that Lakshya Sharma successfully completed the internship in the role of Junior Software Developer - Agribusiness Solution. It also records dedication, professionalism, willingness to learn and grow, integrity, and commitment during the internship.

Organization Detail	Information
Organization	YuvaIntern
Internship Role	Junior Software Developer - Agribusiness Solution
Start Date	01 August 2026
End Date	29 August 2026
Duration	4 weeks
Mode	Remote
Founder	Kounal Gupta
Address	B12, Sector 6, Noida, 201301

4.3 Problem Statement

Agricultural activities involve multiple operational requirements and decisions. Without appropriate software support, it can be difficult to organize these requirements, manage relevant information, and translate operational needs into efficient digital workflows.

The problem addressed through the internship role was to contribute toward software solutions that can optimize agricultural processes and support improvement in yield. This required understanding agribusiness requirements and translating them into functional software applications in a structured and usable manner.

4.4 Project Objectives

- To understand software requirements associated with agribusiness processes.
- To study how agricultural requirements can be translated into functional software solutions.
- To contribute to software solutions aimed at optimizing agricultural processes.
- To understand how software can support activities related to improving agricultural yield.
- To develop practical software-development and problem-solving skills in a professional environment.
- To improve communication, documentation, collaboration, and professional working practices.

4.5 Scope of the Project

The scope of the internship was centered on developing software solutions for agribusiness and understanding stakeholder requirements. The internship role specifically involved developing software solutions to optimize agricultural processes and improve yield, while working with agribusiness experts to understand their needs and translate them into functional software applications.

- Understanding agribusiness requirements and operational needs.
- Translating identified requirements into functional software applications.
- Supporting digital workflows related to agricultural processes.
- Exploring software-based approaches for agricultural process optimization.
- Considering how software solutions can contribute to yield-related improvement.
- Applying software-development and professional working practices in a remote internship environment.

4.6 Technologies and Tools Used

The internship offer letter confirms software development, agribusiness requirements, and functional application development as the core scope of the role. Based on this scope and the technical skills applied during the internship, the following technologies and tools were used to build and manage the agribusiness software solution.

Category	Status / Use
Software Development	Core internship responsibility
Agribusiness Requirements	Requirement understanding and analysis
Functional Applications	Translation of requirements into software
Python	Used for core application logic and data processing
MySQL	Used to store and manage agribusiness data
Excel / Power BI	Used for data analysis and reporting
Git / GitHub	Used for version control during development

4.7 System Architecture

A conceptual architecture for the agribusiness software solution can be represented through a sequence of requirement, application, processing, data, and output layers. This architecture is based on the role description in the internship offer letter and is intended as a conceptual representation rather than a claim about an undocumented production system.

Layer	Description
Agribusiness Stakeholders	Provide requirements, operational information, and business needs.
Application / User Interface	Allows users to interact with the software solution.
Business Logic	Processes requirements and applies application workflows.
Data Layer	Stores and retrieves relevant agriculture and operational information.
Analytics / Decision Support	Supports interpretation of information where applicable.
Output Layer	Presents processed information, results, or recommendations to users.

Overall flow: *Agribusiness Requirements → User/Application Interface → Business Logic → Data Processing & Storage → Results / Decision Support.*

4.8 Methodology

The internship methodology was organized around understanding requirements, planning software solutions, development, testing, refinement, and documentation.

1. Requirement Understanding: Identify and understand the needs of agribusiness stakeholders.
2. Requirement Analysis: Break the identified needs into clear software functions, inputs, outputs, and workflows.
3. Solution Planning: Plan the application structure and determine how requirements can be translated into functional modules.
4. Development: Implement the required functionality using the technologies selected for the actual project.
5. Testing: Verify that developed functionality behaves as expected and identify errors or usability issues.
6. Feedback and Refinement: Improve the solution based on review, feedback, and identified issues.
7. Documentation: Maintain records of the work, learning outcomes, and supporting evidence for internship evaluation.

4.9 Expected Outcomes

- Practical understanding of software development for an agriculture-related domain.
- Improved ability to analyze business and stakeholder requirements.
- Ability to translate domain requirements into functional software workflows.
- Improved problem-solving and analytical thinking.
- Better understanding of software-based agricultural process optimization.
- Improved professional communication, documentation, and time management.

- Stronger foundation for future software development and domain-specific digital solutions.

4.10 Certificates of Completion and Communication Proof

The official YuvaIntern Certificate of Experience confirms successful completion of the internship in the role of Junior Software Developer - Agribusiness Solution. The internship offer letter confirms the four-week internship period from 01 August 2026 to 29 August 2026 and the remote mode of work.

The official completion communication received through email is included below as additional communication proof. The email congratulates Lakshya Sharma on successfully completing the internship and states that the official Certificate of Experience was attached to the email.

Appendix – Supporting Course Completion Certificates

The following Cisco Networking Academy certificates are attached as supplementary technical-learning evidence and are separate from the primary YuvaIntern internship completion proof.

Data Analytics Essentials

Introduction to Modern AI

Certificate of Course Completion

Lakshya Sharma

has successfully achieved student level credential for completing the Introduction to Modern AI course.

The student was able to proficiently:

- Explain basic concepts in AI and Machine Learning.
- Use photo apps to classify objects, blur the background of a photo, and explain how object detection and image segmentation help to accomplish this.
- Use machine translation and explain the nuances and limitations of using AI for language translation.
- Explain fundamentals of how large language models work, and how to prompt LLMs to make use of these traits.
- Demonstrate use cases of LLM enabled chatbots: idea generation, summarization, rewording, and grading.
- Utilize two-way dialogue with chatbots, such as practicing for mock interviews.
- Facilitate collaboration between two chatbots to achieve a goal.
- Use LLMs with tools (web search, web page scraping). Multimodal prompting with images and text.

Apply AI: Analyze Customer Reviews

Certificate of Course Completion

Lakshya Sharma

has successfully achieved student level credential for completing the course:

Apply AI: Analyze Customer Reviews

The student was able to proficiently:

- Choose the right AI or non-AI tool for each task (LLM, chatbot that runs code, spreadsheet app, text editor).
- Process tabular data with an LLM, chatbot that writes and runs code, and spreadsheet app (Excel).
- Format tabular data that can be transferred between a chatbot and spreadsheet app.
- Prompt a chatbot to write and run code to process tabular data.
- Write complex spreadsheet formulas with the assistance of a chatbot.
- Include the "human in the loop" to make final decisions.
